Abstract:

Congenital portosystemic shunts (PSS) present a significant challenge in veterinary medicine, requiring comprehensive analysis for effective diagnosis and management. This repository offers an extensive overview of 27 cases of congenital PSS in dogs, spanning the period from 2015 to 2023. The data are shown in **Table 1**.

Keywords: Portosystemic shunts, dogs, clinical signs, types of PSS, laboratory results

Funding: This research was supported by Slovenian Research Agency (research program No. P4-0053).
